Consistent Profit

Practice on Demo Account

+ less than 10 000$ on demo balance
+ bet size below 1 $ and more
+ less number of trades
+ less times on demo average

Win Rate or Win Ratio

+trades only that what he set up in his rules
+ he trades as less as possible and leaves the market
+doesn't change anymore his trading style or strategy
+takes completely the responsibility
+don't need confirmation from no one and don't listen to no one
+doesn't believe anyone or tries nothing without any proof
+ good win rate for his strategy or trading style or money management

Discipline

+high discipline because lost lot of money
+enters at the right time because of skil
+cares about market condition 50% of the win
+cares about news releases
+cares about payout percentage
+cares about bet size
+strict money management
+cares about quantity as less as possible
+cares a lot of the quality trades
+avoid a lot of trades which are not good
+is not affected by emotions - cause he knows win ratio
+takes responsibility
+has no fear
+don't does multiple bets
+ bet and then calm down do another
+ does avoid trading emotionally

Money Management

+knows when to stop exactly
+knows exactly the bet size
+to get as fast as necessary to his goal
+ don't be affected by emotions
+ great discipline
+ great skill
+ great win rate

Emotions

good win rate, good skill good and strict money management , good discipline

EMOTIONS

RESULT: CONFIDENCE OVERCOMES EMOTIONS

LOW WIN RATE

Newbie Trader

+trades every signal and strategy
+trades too much
+changes often his indicators
+doesn't care win ratio
+doesn't take responsibility
+blames everyone else not himself
+need confirmation from others
+believe everyone and tries everything

MEDIUM WIN RATE

Average Trader

+only moderate signals
+he changes only a bit hit strategy or trading style
+change his indicator only few
+takes responsibility not completely
+need not more confirmation build some kind of confidence
+don't anymore everyone and doesn't everything - what sounds logic
+he cares win rate - has no idea how to increase

HIGH WIN RATE

Pro Trader

+trades only that what he set up in his rules
+ he trades as less as possible and leaves the market
+does not change anymore his trading style or strategy
 +takes completely the responsibility
+don't need confirmation from nobody and doesn't listen to nobody
+does not believe anyone or tries nothing without any proof
+ good win rate for his strategy or trading style or money management

LOW DISCIPLINE

Newbie Trader

+low discipline because nothing loose and demo
+enter to early into trades, because of reckless
+wanna be rich or millionaer
+doesn't care market condition
+doesn't care about news releases
+doesn't care payout percentage
+doesn't care bet size
+no money management
+doesn't care quantity of trades
+doesn't care quality of trades
+not affected by emotions
+they have no fear of a trade
+spider trading - multiple bets

MEDIUM DISCIPLINE

Average Trader

+medium discipline because he already lost money
+don't enters anymore so often early but he enters
sometimes more often lately
 +care more or less about market condition
+ care more or less about news releases
+ care more less about payout percentage
+care about the bet size
+has some kind of money management
+care about quantity of trades
+care more or less about quality of trades
+affected by emotions which leads sometimes to irrational
behavior
+has some fear of trade
+do not more so often multiple bets

HIGH DISCIPLINE

Pro Trader

+high discipline because lost lot of money
+enters at the right time because of skil
+cares about market condition 50% of the win
+cares about news releases
+cares about payout percentage
+cares about bet size
+strict money management
+cares about quantity as less as possible
+cares a lot of the quality trades
+avoid a lot of trades which are not good
+is not affected by emotions - cause he knows win ratio
+takes responsibility
+has no fear
+don't does multiple bets
+ bet and then calm down do another
+ does avoid trading emotionally

← Rejection

HOW TO TRADE

Enter only into a CALL trade when price moves in Purchase time below the closing price of previous candle and on rejection from below at least of ½ of real body of previous candle in upper direction.
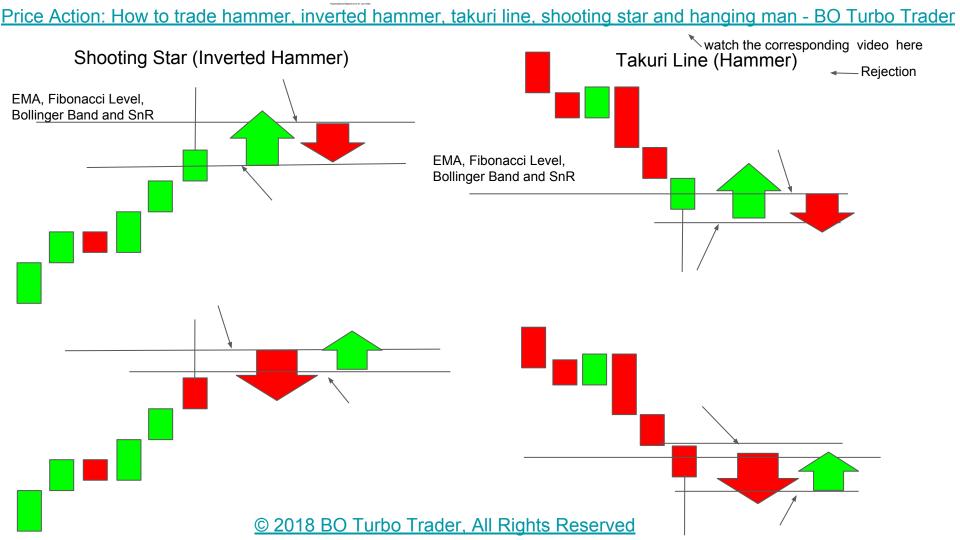

⚠ Do not enter into a CALL trade if price is below ½ of real body or breaking through opening price of previous candle.

CRITERIAS

- in uptrend between key levels
- market in strong uptrend
- max ⅔ wick in relation to real body (⅓)
- bullish real body

PATTERN PSYCHOLOGY

- price is pushed up till resistance
- rejection from resistance (sellers stepping in)
- close as bullish candle (buyers still in control)
- small or no lower shadow/wick/tail (no selling pressure)

SUPPORT AND RESISTANCE

- higher high (HH), upper shadow/tail/wick of candlestick acts as resistance

ENTRY POINT

- On next candle below closing price of previous candle

candle and on rejection from above support in upper
direction.

⚠️ Do not enter into a CALL trade if price is breaking
through the support of previous candles without
any sign of rejection.

CRITERIAS

- after downtrend at key levels
- market in healthy downtrend (Call)
- after few bearish candle price weaker candles
- three weak candles with gap up and bearish real body with smaller real body
- last candle of those three candles closes close to support and is smallest of previous candles

PATTERN PSYCHOLOGY

- few bearish candles push price down to support
- next candles are weak and open after gap up and close at similar price level like previous candles
- candles with smaller real body on same price level at support
- price shows lost of bearish momentum (buyers in control)
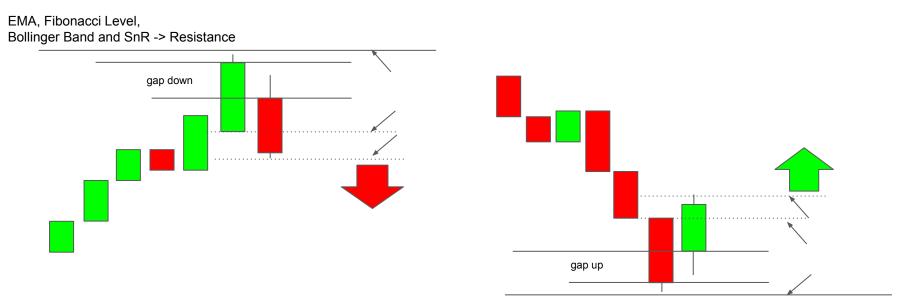

SUPPORT AND RESISTANCE

- lower low (LL), lower shadow/tail/wick and real body of all candles acts as support

ENTRY POINT

- On next candle below closing price of previous candle and above support of previous candles

and SnR, Trendlines

Rejection

HOW TO TRADE

Enter only into a CALL trade when price moves in
Purchase time below closing price of previous
candle and on rejection from below above support
and resistance in upper direction

⚠️ Do not enter into a CALL trade if price is breaking
through support and resistance without any sign of
rejection.

CRITERIAS

- in uptrend above or at key levels
- market in strong uptrend (Call)
- price creates bullish candle (mother bar) above support level
- Next candle is bearish candle (inside bar) which is engulfed completely from previous mother bar
- lower shadow/tail/wick enforce effect of inside bar

PATTERN PSYCHOLOGY

- price pushed up above resistance and closes above resistance (mother bar)
- next candle retrace back to now support level and reject from it
- next candle continues to go up further (buyers in control)
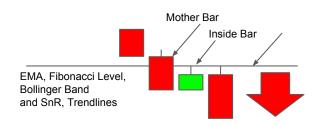

SUPPORT AND RESISTANCE

- lower low high (LL), lower shadow/tail/wick and real body of previous candle acts as support

ENTRY POINT

- On next candle below closing price of previous candle and/or above support level

Candlestick Mathematics

watch the corresponding video here
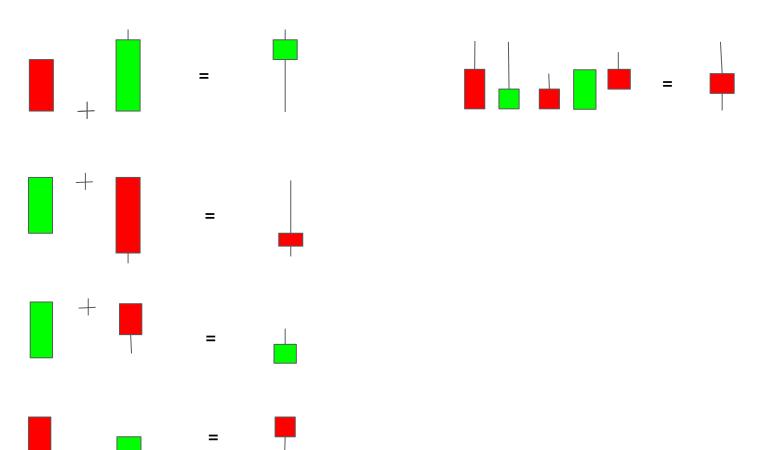

watch the corresponding video here
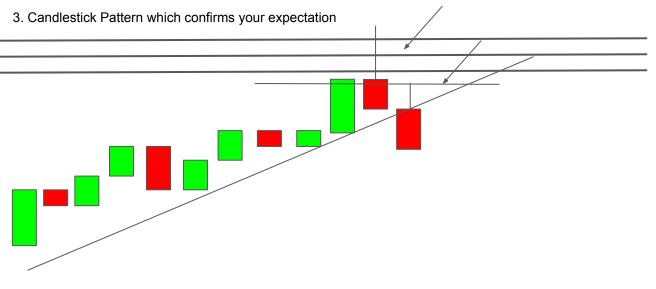

- difference between opening price of 1st candle and closing price of last candle forms real body of calculated candle

- higher high of all calculated candles forms the upper shadow of the calculated candle

- lower low of all calculated candles forms the lower shadow of the calculated candle

- all multi bar candlestick reversal pattern can be reduced thanks to candlestick math to a pin bar

- the calculation of the resulting real body of such candlesticks can give a hint of the power of that reversal or continuation candlestick pattern

- the part of the candle that blends into the others becomes the wick, this can give a hint of the market pressure

- the time frame, the amount of candles and the ratio of wick in relation to real body can give a hint about future market moves on short term basis

- for the right calculation of candlestick pattern should be always selected the time of the new created candle

- 2 bar candlestick pattern needs mostly 2 bar for the trend to unfold, also if there is applied candlestick math, that means if the result of a 2 bar reversal or continuation pattern is a pin bar, the trend following that pin bar needs 2 candles to unfold

Rejection

1. Major Trend and Minor Trend in your favor

2. Strong Support & Resistance Level (Major Key Level)

3. Candlestick Pattern which confirms your expectation
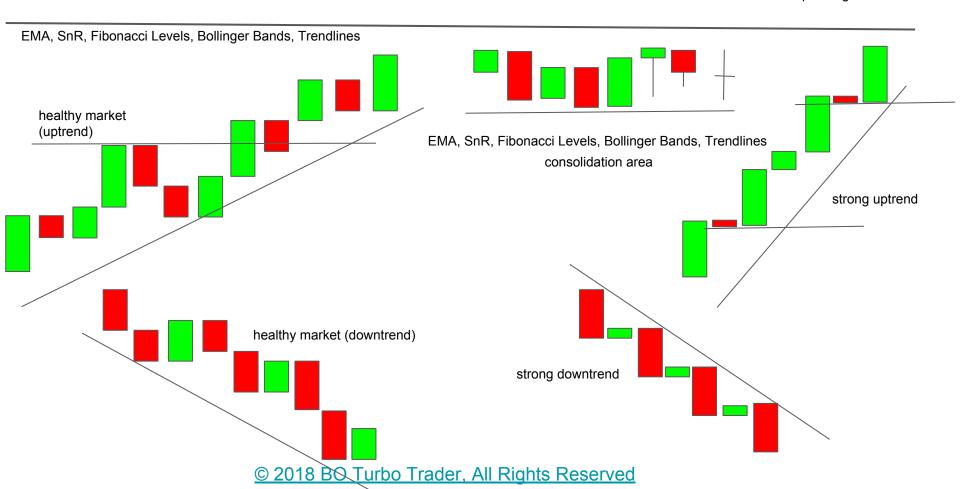

EMA, Fibonacci, Trendline, S&R, BB -> Resistance

EMA, Fibonacci, Trendline, S&R -> Support

watch the corresponding video here

- rejection has to expect only on major key levels areas like EMA, BB, Trendline, Fibonacci and horizontal SnR

- price has to touch the specific key levels area - if not - no valid rejection

- rejection makes only a small part of the trading setup, in overall 20%, further 20% the key level, another 20% the candlestick pattern and another 20% the trend

- in strong trending market (steep inclination up (uptrend), down (downtrend)) should be always expected a rejection in direction of the trend (trend continuation setup) and mostly after price break through the SnR

- in weak or healthy trending market should be expected a reversal against the direction of the trend (reversal setup) and mostly before price will touch the SnR

- good trading setups consist of major and minor trend in your favor, strong SnR on which price reacts in form of a rejection and a candlestick pattern which confirms the expectation of a continuation of the trend or a reversal

- a rejection is a fast and sharp movement of price which demonstrates almost the entry of buyers/sellers in the market

- the rejection is the last confirmation of a trading setup after trend analysis, SnR and confirmation of expectation of direction with candlestick pattern

📚 Price Action: How to spot weak snr and strong s&r (support & resistance) the right way - BO Turbo Trader

watch the corresponding video here

EMA, SnR, Fibonacci Levels, Bollinger Bands, Trendlines

healthy market (uptrend)

EMA, SnR, Fibonacci Levels, Bollinger Bands, Trendlines

strong uptrend

healthy market (downtrend)

strong downtrend

📖 Price Action: How to spot weak snr and strong s&r (support & resistance) the right way - BO Turbo Trader

watch the corresponding video here

- on healthy trending market price will mostly reverse from SnR (EMA, Fibonacci, Trendline, BB, horizontal SnR)

- on strong trending market price will mostly break through SnR (EMA, Fibonacci, Trendline, BB, horizontal SnR)

- consolidation or ranging market shows that trend is pushing against strong SnR which can break at any moment

- uptrend is defined by more green candles than red candles and smaller red candles than green candles

- downtrend is defined by more red candles than green candles and smaller green candles than red candles

.

- candlestick pattern behave differently in different market conditions (trending, ranging etc.)

- the strength of any key level is determined by the trend strength, the market pressure and of the quantity of touches and the change of polarity - support becomes resistance and resistance becomes support

20 EMA (yellow) above PRICE

$1+1 = 2$

$1+(-1)= 0$

← Minor Trend

- EMA and BB help to identify the major trend

- Price action help to identify the minor trend

- uptrend: price above all EMA (major uptrend) - The 200 EMA lowest and 20 EMA at the top.

- uptrend: price between upper 1 deviation bb and upper 2 deviation bb

- downtrend: price below all EMA (major downtrend) - The 20 EMA lowest and the 200 EMA at the top.

- downtrend: price between lower 1 deviation bb and lower 2 deviation bb

- trading setups should be in direction of the minor and major trend to increase the odds of a good outcome of the trade

- ranging: price is moving above and below EMA (EMAs crossing)

- ranging: price is moving between the upper 1 deviation and the lower 1 deviation around the middle bollinger band

- on ranging market trades should be in the direction of the minor trend

- identifying swings (minor trend) in order to trade in trend favor

📚 Price Action: How to trade channel breakouts and how to avoid false breakouts - false breakout meaning

- false breakouts happen at key levels (EMA, Fibonacci, BB, Trendline, horizontal SnR, Support and Resistance)

- the most common fakes or fake outs are weak candle like doji, spinning top, pin bar and the hammer

- rare fakeys, false breakouts or fake outs are inside bar, outside bar, railway tracks

- fakeys, false breakouts or fake outs can consists of 1 bar candlesticks, 2 bar candlesticks, 3 bar and multi bar candlesticks

- fake breakouts occur mostly when the next support and resistance level is far away and the candle are close to the current support and resistance level

- fake breakouts occur mostly when price do not break the specific support and resistance level with determination which is often a hint that a fake breakout occured

Retracement

Retracement

Retracement

Retracement

Retracement

Retracement

📚 Price Action: How to spot and identify market reversals and retracements - BO Turbo Trader
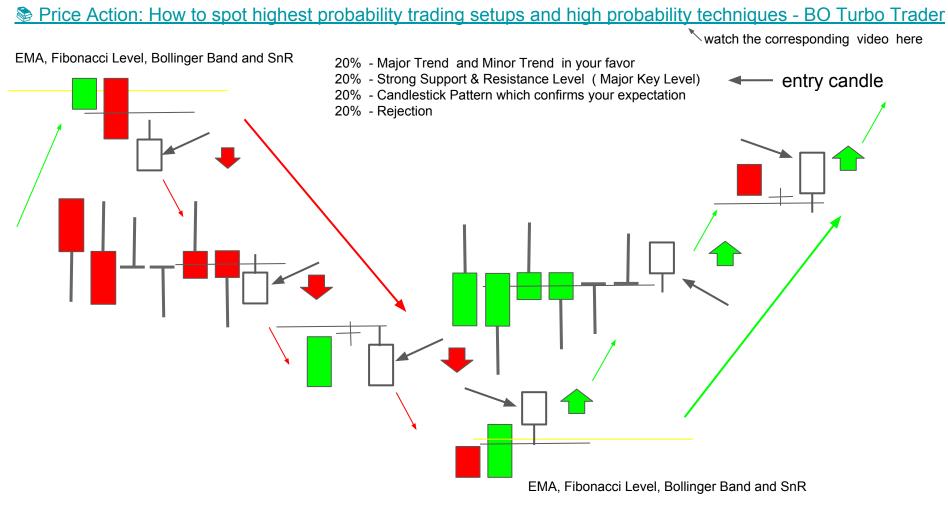

- a reversal is a price change to an opposite direction, reversals on lower time frame (1 min) are retracements on higher time frame (5 min)

- a retracement is a temporary reversal against the prevailing trend, where price will continue after the retracement the trend

- reversals will hold mostly longer than 1 candlestick pattern depending from the trend strength of the previous trend

- retracement mostly hold 1 candlestick pattern and are mostly weak candles depending from the trend strength of the prevailing trend

- longer and stronger the previous trend longer and stronger the reversal and/or retracement

- reversal will mostly initiate by reversal candlestick pattern like engulfing candle, pin bar, hanging man, doji etc.

- retracements will mostly initiate by candles with wicks which show pressure against the prevailing trend

HOW OUR PLATFORM WORKS

watch the corresponding video here

EMA, Fibonacci Level, Bollinger Band and SnR

20% - Major Trend and Minor Trend in your favor
20% - Strong Support & Resistance Level (Major Key Level)
20% - Candlestick Pattern which confirms your expectation
20% - Rejection

entry candle

EMA, Fibonacci Level, Bollinger Band and SnR

- trading setups should consist of major trend and minor trend in your favor, strong support & resistance level (major key level), candlestick pattern which confirms your expectation and last but not least as last confirmation the rejection

- reversal candlestick pattern, chart pattern as initial start of a trend, like engulfing candle, evening star, double top, head and shoulders and so on, trading the next candle like explained in the candlestick pattern section of the ebook and/or chart pattern

- as soon candlestick pattern appear which confirms that the prevailing trend is still active and strong enough like bearish hammer in a downtrend, gravestone doji, inverted bearish hammer and so on on downtrend, trading the next candle in direction of the trend

- when price does a pullback at 1 deviation bollinger band, and kind of EMA, Fibonacci Level, Trendline etc. trading the following candle in direction of the prevailing trend after that pullback of the SnR

- after that downtrend or when the downtrend is losing momentum and steem waiting for any kind of bullish reversal candlestick pattern (morning star, bullish engulfing candle, double bottom, inverted head and shoulders) to trade the same concept now in an uptrend which is explained before for the downtrend

- after reversal candle or chart pattern you can expect that a new trend will be established and this trend will mostly hold for more than a few candles depending of the opposite trend strength and duration

📚 Price Action: How to read upper shadow and lower wick, tail, all about wicks, shadows, tails- BO Turbo Trader

- pressure reading is based on the wicks and real body of the candlesticks, the ratio between wick size and real body size, the ratio between upper shadow/wick/tail and the lower shadow/wick/tail and the position of the closing price in relation to the candlestick pattern (close to the closing price or close to the opening price)

- bullish candle: if upper shadow is greater than lower shadow (selling pressure +1), if upper shadow is greater than real body of bullish candle (selling pressure +1) and the bullish real body (buying pressure +1) as result 2:1 for selling pressure

- bearish candle: if lower shadow is greater than upper shadow (buying pressure +1), if lower shadow is greater than real body of bearish candle (buying pressure +1) and the bearish real body (selling pressure +1) as result 2:1 for buying pressure

- this calculation can be done by every kind of candlestick only by comparing the ratio between real body and wicks, wicks and wicks and the position of the closing price in relation to the candle

- selling pressure and buying pressure do have only a small impact of the trading setup, because the most of the pressure is coming from the trend and only a small part is determined by the candlestick itself

- specific candlestick pattern like hammer, inverted hammer, doji etc. has their own pressure reading because those one are well recognized and traded by traders

📚 Price Action: How to read examples of market pressures, types of market pressures - BO Turbo Trader

- the most important forces for market pressure are the major trend and the minor trend and support and resistance (major key level) which can hold a trend (retracement) or even reverse price

- a strong trend is more powerful than any candlestick pattern, chart pattern or even support and resistance, which makes pressure reading easy - in direction of the prevailing trend.

- a strong confirmed and validated support and resistance area is more powerful than any candlestick pattern, chart pattern or even a trend, which makes pressure reading easy - against the prevailing trend.

- in all other cases the relation between shadow/tail/wick and real body, the upper shadow/tail/wick/ in relation to lower shadow/tail/wick and the position of the closing price in relation to the whole candlestick pattern can give a hint if price will continue the trend, or even doing a pause in form of a retracement or even change the direction of the trend in form of a reversal

- special task of market pressure reading are false breakouts, fakeys or fake breakout, because those kind of breakouts are able to initiate a reversal without giving a hint based on candlestick shadow/tail/wick ratio to real body, and only be able to spot by the context

- special task of market pressure reading are also specific candlestick pattern like hammer, inverted hammer, gravestone doji, dragonfly doji etc. those well known and easy to spot candlestick pattern have their own dynamic and can not be revealed only based on the candlestick shadow/tail/wick to real body or wick/tail/shadow ratio

📚 Price Action: How to read advanced candlestick charting techniques, retracement / reversal- BO Turbo Trader

- the most important forces for market pressure are the major trend and the minor trend and support and resistance (major key level) which can hold a trend (retracement) or even reverse price

- a strong trend is more powerful than any candlestick pattern, chart pattern or even support and resistance, which makes pressure reading easy - in direction of the prevailing trend.

- a strong confirmed and validated support and resistance area is more powerful than any candlestick pattern, chart pattern or even a trend, which makes pressure reading easy - against the prevailing trend.

- in all other cases the relation between shadow/tail/wick and real body, the upper shadow/tail/wick/ in relation to lower shadow/tail/wick and the position of the closing price in relation to the whole candlestick pattern can give a hint if price will continue the trend, or even doing a pause in form of a retracement or even change the direction of the trend in form of a reversal

- market pressure forms candlestick pattern and chart pattern with similar appearance but with other background story, so that an inverted bullish hammer in different context has different outcome, due to the major key level and due to the trend strength

- such difference can be made visible by observing the lower time frame were the single moves of the creation of a candlestick pattern for the same candles can be completely different which implicates a different outcome or predicting move

- Overbought: Overbought means an extended price move to the upside, when price reaches these extreme levels price mostly tends to reverse. But it can stay as long as it want in this overbought area, mostly in strong uptrends. Momentum Indicator & Oscillator (RSI, Stochastic, CCI, etc.) measure the speed and change of price movements and display a numeric value for the overbought, mostly above 70 or 80 is considered as overbought.
  Price is overbought when price is moving outside Bollinger Band or far away from EMA. In ranging market overbought area is close nearly 20% of the trading range to resistance level, in trending market overbought area can extend above resistance level (ascending trendline).

- Oversold: Oversold means an extended price move to the downside, when price reaches these extreme levels price mostly tends to reverse. But it can stay as long as it want in this oversold area, mostly in strong downtrends. Momentum Indicator & Oscillator (RSI, Stochastic, CCI, etc.) measure the speed and change of price movements and display a numeric value for the oversold, mostly above 30 or 20 is considered as oversold.

  Price is oversold when price is moving outside Bollinger Band or far away from EMA. In ranging market oversold area is close nearly 20% of the trading range to support level, in trending market oversold area can extend below support level (descending trendline).

LL

- Minor Support and Resistance (SnR)

    after first touch and reversal SnR (Support and Resistance, EMA, Bollinger Band, Fibonacci Level, Trendline) not confirmed on change of polarity and support becomes resistance and vice versa Minor Support and Resistance (SnR) becomes major support and resistance (major key level) and on support level CALL Option and on resistance level PUT Option
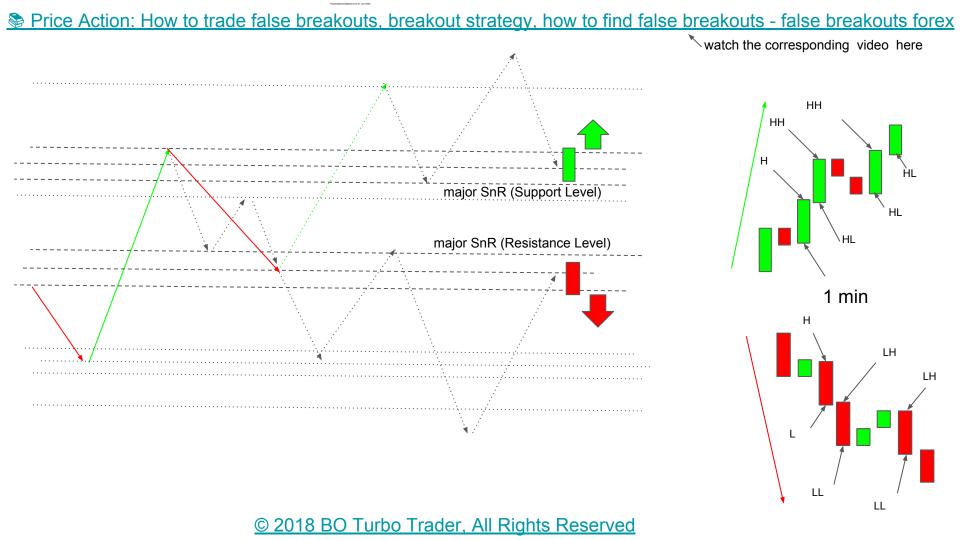

- Major Support and Resistance (SnR)
    after change of polarity and support becomes resistance and vice versa, minor SnR becomes major SnR and can be used as major key level. Major key level or major SnR are zones, areas and not exact levels, so price can do fake breakout, or reverse above or below major SnR or even break major SnR depending on trend strength and quantity of touches of that major SnR.
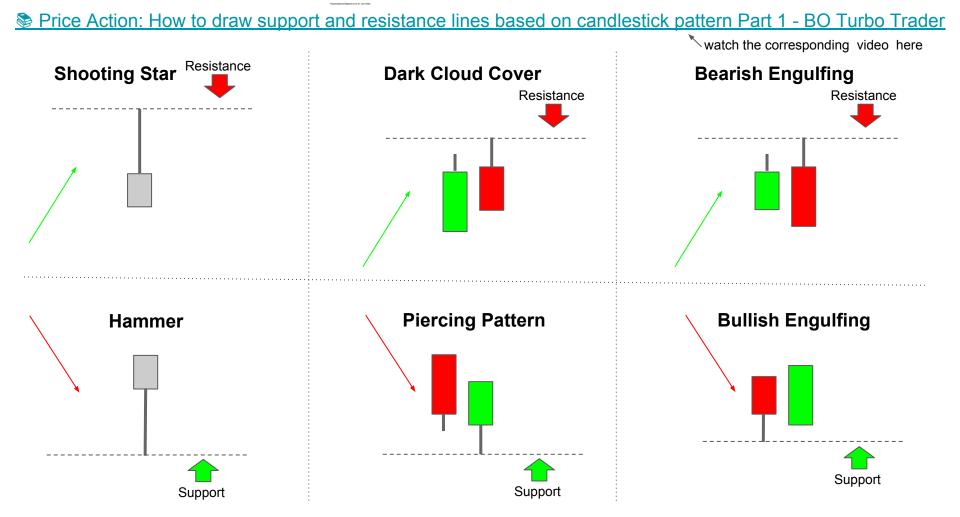

- Trading rules

    in major uptrend Call Option on major support level in direction of the major trend

    In major downtrend Put Option on major resistance level in direction of the major trend

📚 Price Action: How to trade at support and resistance, minor and major SnR and SnR Zones - BO Turbo Trader

- Timeframe Analysis

  Analysis of higher time frame based on switching time frame or simple by doing candlestick math gives an overview about the prevailing trend

- Trend Analysis

  Analysis of the trend, in what kind of cycle of trend do the price move, previous trend, uptrend, ranging market or downtrend

- Market Condition Analysis

  Based on Bollinger Band and EMA and price action understanding market condition, candlestick pattern and price action behaves in different market condition differently, depending on market condition adapting applicable trading setups, trend continuation, reversal trading setups, pullback trades etc.

- SnR Analysis
  Spotting SnR (Trendlines, BB, EMA, Support and Resistance, Fibonacci Level) to understand possible reversal points of price and necessarily applicate right trading setups at key levels or in between key levels

- Chart Pattern Analysis

  Spotting chart pattern, in general continuation or reversal chart pattern, which enforce existing trend or which indicate new upcoming trends can lead to trading opportunities

- Candlestick Pattern Analysis

  Spotting candlestick pattern which confirm previous analysis increase odds of success dramatically and can increase win rate drastically

📚 Price Action: Which market conditions to avoid using candlestick analysis on binary options - BO Turbo Trader

watch the corresponding video here

GENERAL CONDITIONS

Forex Market hours

http://www.forexmarkethours.com/markethours.php

avoid first hour of opening and closing of any market
- (London, New York, Sydney, Tokyo)

News

https://www.investing.com/economic-calendar/

https://www.fxstreet.com/economic-calendar

check for MEDIUM and HIGH Impact NEWS
- avoid those for at least 1 hour

check for SPEECH or SPEAK
- avoid those for at least 1 hour - 2 hours

SPECIFIC CONDITIONS

❌

avoid centipede wicks
avoid DNA crossing of EMA's
avoid flat EMA's
avoid trending EMA's with greater flat EMA's
avoid consolidation areas
avoid narrow bollinger bands
avoid narrow EMA's
avoid ultra tiny candles on 5 sec chart

✅

seek for direction in the market
seek direction using trendlines
seek direction using chart patterns
seek direction using ema alignment
great distance between EMA's
great distance between Bollinger Bands

EPILOGUE

I would like to say a very big thank you for buying this ebook, am glad you made it here, because the information contained inside is all you need, especially as a binary option turbo trader to get profit out of the market, to get out of debt, make yourself a living or help your friends and family.

There is a reason why i choose to make this ebook and the youtube videos, i have seen so many trader struggling and doing wrong trades only because of not understand the basics about price action.

If you like this ebook and you decide to write me something, do not forget to like my videos on youtube, comment below those and if you want to contact me - you will find contact details below. Thanks, stay safe and keep itm.
